T-GRID

Matrix of 4
tradability related
inputs

Long term			Intermediate term			Short term	
1	2	3	4	5	6	7	8
9	10	11	12	13	14	15	16

Long term:

- 1) Trend indication
- 2) Trend direction
- 3) Directional strength
- 9) Volatility
- 10) Statistical variance
- 11) Relative Strength

Intermediate term:

- 4) Momentum Stochastic
- 5) Trend indication
- 6) Trend to noise
- 12) Money Flow
- 13) Stochastic movement
- 14) Volume support

Short term:

- 7) Buy-sell pressure
- 8) Last day move
- 15) Last day range
- 16) Last day change

Tradability	
1	2
3	4

Tradability:

- 1) Trading value
- 2) Healthy volume
- 3) Prices ascending
- 4) Sortino Ratio

Bullishness is indicated by green colour, whereas red is an indication of **bearishness** for the trading instrument. Brightness of colour indicates score strength. Grey colour denotes neutrality. Rank is an aggregate score combining Technical strength, Tradability Score and recent price movement metrics from the GRID elements and is used for opportunity sorting.

When in trade idea discovery mode or when qualifying your existing holdings, utilising a holistic approach is important. Too often, traders and investors will adopt a simple, uni-dimensional technique to drive their decision-making. But in today's markets, there is no one methodology that will work consistently with any sort of longevity.

Most traders can recall that they personally went through phases when they were 'News Traders', 'Moving Average Crossover advocates', 'MACD disciples', used 'Harami' and 'Dark Cloud Cover' patterns, and/or so many more - only to give up on them and try the next 'best' approach. But one soon realizes that one single analysis cannot be used in complex financial markets. A holistic approach is required.

GRID is designed to lower two challenging hurdles that can lessen your effectiveness when decision-making:

1. Deliver to you as much valuable information as possible within a very small footprint package.
2. Assemble for you a full spectrum of insights - across multiple time frames and techniques - to capture a holistic view of a trade opportunity.

Your steps to make a valid GRID interpretation:

1. GRID's are usually delivered within lists, often sorted by GRID Score* in descending order - allowing you to compare the overall technical environment. So from a bird's eye view, look for the most bullish opportunities by searching out the predominantly green GRID's.
2. Become proficient in breaking down an individual GRID into the 3 terms (time frames) that are being analyzed. See the [GRID Element Details](#) tab for a detailed visualisation.

Focus	Position	Time Frame
Long term	Leftmost 6 squares	2 - 3 Months
Intermediate term	Middle 6 squares	2 - 3 Weeks
Short term	Rightmost 4 squares	1 - 2 Days
Tradability GRID	Separate 4 squares	Weeks

Focus first on the area of the GRID that pertains to your goal: short, intermediate or long. Then widen your focus to ensure that there is support in the other time frames if possible.

3. Refer to the GRID Sparkline price chart to get a better understanding of the drivers of the GRID. A short term opportunity may have come at the end of an intermediate term downtrend: the GRID will exhibit Red on the left coupled with Green in the right boxes in this case. As you get more proficient at reading the structure of the GRID's you can pick out opportunities with greater accuracy.
4. Understand that the Tradability GRID is an important input designed to help you filter out weaker stocks. No trade opportunity is worth entering if you cannot sell your position due to poor liquidity. Use the Tradability GRID to discover weaknesses such as low liquidity and low Reward/Risk ratios.
5. Watch for GRID Sparklines that show sessions with unusual price moves up and down with Green and Red highlights respectively. A strongly up-trending instrument will exhibit a lot of Green highlights.
6. Finally, incorporating holistic methods in your investing and trading means looking for additional supporting evidence for your trades. A GRID opportunity should be researched using other available resources: is news driving the move, is this a fundamentally robust company, is there an upcoming (or recent) earnings announcement?
7. Develop a simple and repeatable methodology to take a GRID trade idea along the path to an actual trade entry and subsequent sale: with profit. Document this method and repeat it to build an evidence-based approach to trade idea discovery.

(*) GRID Score is a proprietary score derived from the visual components of GRID and other inputs that are variably weighted to calculate a score from 100 - 0 in descending order of holistic technical strength.
